<Project Title: OPTIROUTING - A low cost and modular solution for routing optimisation in transport and distribution SMEs>

<Financial Scheme: >

<Description: The aim of this project is the development of a routing optimisation software solution easy to configurate and to use it, based on a low cost subscription fee that ensure easy maintenance and future updates. The solution to develop will be modular and includes a standarized GIS based solution. The solution supports fleet trace and tracking, real time planning and mobile communication with the fleet.

The SMEs will be able to appropiately plan the service of distribution by optimising the kilometers traveled and the fleet utilisation, reducing distribution cost around 10%.

Different type of distributors SMEs will participate in order to cover a wide diversity of business cases and restrictions to test and validate different optimal route search algorithms.
