----- PARTNER SEARCH ICT-EU-SMCP-6 -----

<Reference n.: ICT-EU-SMCP-6>

<Deadline: 15/11/2007>

<Programme: >ICT

<Project Title: unspecified>

<Financial Scheme: >small medium

<Description: The medical community accepts the fact that a daily number of specific activities such as, visual and reasoning stimulation, simple orientation techniques and basic rules for dietary intakes, improve mental functions affected by AD

As the leader of the group, we are going to implement in a social care system our solution that is based on exercises and occupational therapies, which will aid the patient to reduce the rate of increasing symptoms. All of them developed in a distributed IT environment
Neither patients nor caretakers will need to have extended computer knowledge to use the psychotherapy distributed system. That way, in a home-based care, the activities can be done by patients under the assistance and supervision of relatives who usually are the real caretakers

By using IT, we have developed a motivating and effective system useful not only to improve patients' mental conditions but also to struggle against caretakers' loneliness

<Organisation Type: Impresa>

<Partner Sought: Related to the following knowledge areas
Alzheimer's disease
Geriatric medicine>
