Prossime Conferenze su Donne & Scienza, Ottobre 2007

APRE ha il piacere di segnalare due eventi circa il tema Donne & Scienza che avranno luogo nel mese di Ottobre in varie città europee.

An international conference on women in engineering and technology research will be held in Paris, France, on 26 and 27 October.

The event is organized in the framework of the EU-Science in Society-funded PROMETEA (Empowering Women Engineers in Industrial and Academic Research) project.

The goal of the conference is to gather together specialists to exchange views on gender issues in engineering and technology research careers.

Five plenary sessions will address the following topics:

- gender dynamics of male and female careers;
- differential effects of organizational cultures on male and female careers ;
- recognition of excellence in engineering and technology research;
- identification and evaluation of good practice;
- transversal issues raised by PROMETEA research.

In addition to these five sessions, a roundtable will bring together men and women working in engineering and technology research, students who plan to become researchers, people responsible for research policies and researchers working on gender and research. Two networking sessions are also planned.
