<Reference n.: ENV-EU-SMCP-7>

<Deadline: 31/12/2008>

<Programme: Ambiente e cambiamento climatico>

<Project Title: Area 'Environmental stressors'>

<Financial Scheme: Progetti in collaborazione - Small or Medium>

<Description: Area 6.1.2.2 Health effects of environmental stressors other than climate change

\*Projects can be Small or Large scale collaborative projects

The aim of the project will be to establish whether humans are at risk from increased exposure to electromagnetic fields from wireless networks at work, schools or homes. Multiple exposures from several sources should be taken into account. Exposure to different parts of the body should be estimated and potential risks to health evaluated. The project can include in vitro and in vivo investigations. The consortium should provide to interested stakeholders up-to-date scientific evidence-based risk assessment data on EMF and health and should ensure proper risk communication including risk/ benefit aspects.

<Organisation Type: Università>

<Partner Sought: Industry / Research

Expertise required>

Exposure measurement/calculation and measurement/calculation of SAR in body tissue for the purpose of establishing or influencing guidelines for the protection workers, the general public and with particular emphasis on children.>
