# PARTNER SEARCH SSH-EU-LCP-3

01 dicembre 2017

Oggetto: PARTNER SEARCH SSH-EU-LCP-3

Richiesta di una università scozzese, interessata ad una partnership per un progetto inserito nella tematica SSH-2007-1.1.1, Interactions between knowledge, economic growth and social well-being.

[maracchia@APRE.it](mailto:maracchia@APRE.it)

<Reference n.: SSH-EU-LCP-3>

<Deadline: 30/09/2007>

<Programme: >

<Project Title: AWAKE: Advances towards Well-being And the Knowledge Economy>

<Financial Scheme: >

<Description: This 3 year large scale collaborative integrating project provides a prospective analysis of knowledge, in its varied forms, related to economic growth and social well-being and cohesion. Central to the work plan is the collection, analysis and dissemination of knowledges that inform the development, monitoring and evaluation of policies in Europe.

The 15 work packages provide:

- o scientific and technical research through the mapping and analysis of policies and practices on knowledge, incentives, and economic and social well-being
- o an implementation framework based upon detailed management practices and structures that establish and support a project quality system, and
- o the use of project results through an impact strategy that runs

across all 3 years.

Partners will be drawn from 10 countries across the EU to reflect the different histories, cultures, economic profiles, social policies on knowledge and economic growth, and dates of accession to the EU. Experts on major partner economies, Australasia, China, India, Russia and US, will also be members of the project consortia. The energy industry provides a cross national and global comparator. In addition to this exemplar, each partner country will select a leading edge, enterprise in a growth sector for example, in consumer services, education and training services, health and pharmaceutical, and knowledge technologies.

The project is transnational and transdisciplinary. The skills available will integrate the humanities and social sciences, and include consumer studies, economics, geography, history, philosophy, sociology and social policy. This approach ensures a synthesis of knowledges that allows the consortia to pursue innovation and generate new knowledge on the topic. A blend of methods will allow for the breadth and depth of issues to be documented and analysed. Results will be disseminated on an on-going basis, culminating in foresighting to locate European experiences and data in a global context. Key words: knowledge, economic growth, social well-being, incentives>

<Organisation Type: Università>

<Partner Sought: Key words: knowledge, economic growth, social well-being, incentives
